

# Web Components

# PROBLEM

Collisions between the markup,  
scripts or styles served from  
various sources

**Encapsulation**  
(Nothing gets in,  
nothing gets out)

# IFRAME

```
<iframe src="foo.html"></iframe>
```

- Extra network request
- Multiple rendering contexts
- ...

# WEB COMPONENTS

In a nutshell, they allow us to  
bundle markup and styles into  
custom HTML elements

Shadow DOM

# DEMO

```
<video src="" controls></video>
```

video.html

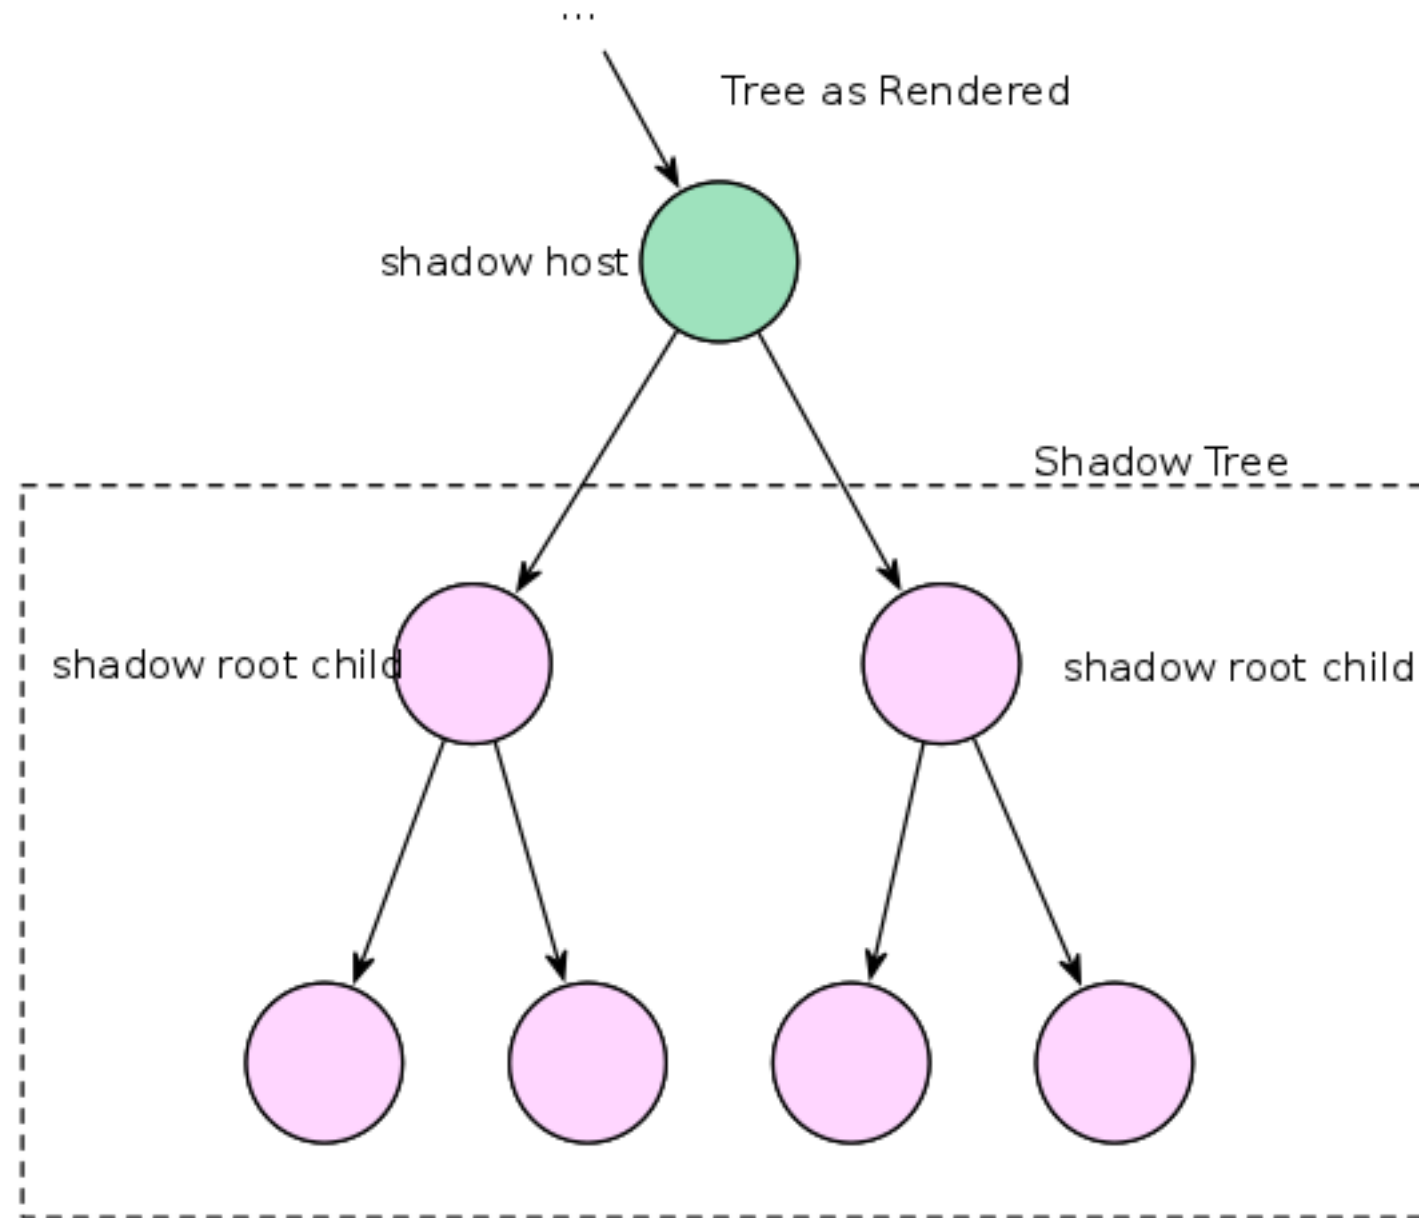

# SHADOW DOM

Shadow Host, Shadow Root, Shadow Boundary

# SHADOW DOM

Shadow Host, Shadow Root, Shadow Boundary

```
<body>
  <div id="container">
    <div>Hello!</div>
  </div>

  <script type="text/javascript" charset="utf-8">
    var host = document.querySelector('#container');
    var root = host.createShadowRoot();
  </script>
</body>
```

**Templates**

Custom Elements

Decorator

```
<body>
  <template>
    <style type="text/css" media="screen">
      h1 {
        color: red;
        font-size: 2em;
      }
    </style>

    <h1>Hello World!</h1>
  </template>

  <div id="container">
  </div>

  <script type="text/javascript" charset="utf-8">
    var tpl = document.querySelector('template');
    var container = document.querySelector('#container');
    container.appendChild(tpl.content.cloneNode(true));
  </script>
</body>
```

# IMPORTS

# CUSTOM ELEMENTS

```
...  
<hello-world>  
  <div>Hello!</div>  
</hello-world>  
  
<script type="text/javascript" charset="utf-8">  
  ...  
  // Register our new element  
  var helloWorld = document.registerElement(  
    'hello-world', {prototype: HelloWorldProto});  
</script>  
...
```

custom.html

# LIFECYCLE CALLBACK METHODS

Callback name	Called when
createdCallback	an instance of the element is created
attachedCallback	an instance was inserted into the document
detachedCallback	an instance was removed from the document
attributeChangedCallback(attrName, oldVal, new Val)	an attribute was added, removed or updated

# POLYMER

<http://www.polymer-project.org/>

- Polymer is a library for the web, built on top of Web Components.
- Encapsulation is the key to creating scalable, maintainable applications. All Polymer resources are components.
